Making workshop inclusive and accessible

Some comments were:

- Expensive to travel - online more accessible
- Recording the event would help many access it.
- Views on the timing of event varied - some wanted weekday and others need weekend. - so might be good to do both?
- Commercial archaeologists don't have the flexibility that academic colleagues do so need notice and evening/weekend better
- Time zone - need to consider different time zones as comments that all event are in UK timezone.

Final comments made

AEA is more interesting, friendly and helpful than many other such groups, and a good way for me, being retired, to keep at least somewhat aware of how the discipline is developing.

I really value my membership of AEA, and get more out of it than other, more expensive, societies. The open science workshop is much-needed, and I very much hope I can make it

There is a real need to provide some training in Open Science methods such as R. I very much value being part of the AEA Community, for me this is the most important service the AEA provides, and fostering the next generation of environmental archaeologists. Its the organisation I feel most at home at and its made me feel welcome ever since I was an Msc student. Its been hugely important.

Keep up the good work!

Glad that the AEA is being positive about practical action to improve members' skills.

Overall, I am happy with the AEA's profile. I think supporting younger researchers should be a key focus (and, I am no longer one myself!). Conference busaries, the John Evans Prize, and running regular conferences are really important for the profile of the AEA and attracting new members.
